

HOW TO USE THE **NEW COMPONENTS**

The 45 new section components are **already in your Clark Pacific file** and published in its library. There's nothing to copy or paste. Your pages and your existing components haven't changed; the components have moved into a tidier layout on the Components page. This guide shows where they are and how to use them.

About 10 minutes to read

Nothing to install

45 components · 11 clickable

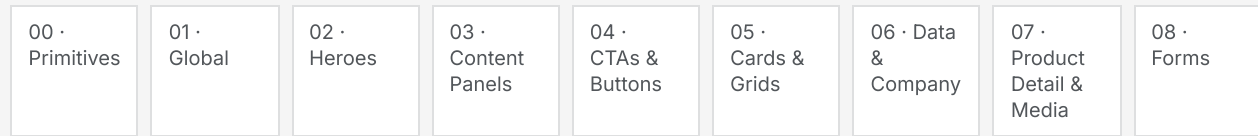

WHAT CHANGED SINCE THE FIRST VERSION OF THIS GUIDE

- **No copying.** The separate *Clark Pacific 2.5 Additions* file is retired. Don't copy from it; its components are older than the ones in your file.
- **Editable text.** Change headings, labels and links from the right-hand panel.
- **Clickable.** Filters, tabs, carousels, galleries and the accordion work in Present mode.

01 FIND THEM

Open the **02 · Components** page. It now has two rows. The top row is your existing library, in order from **00 · Primitives** to **08 · Forms**. The second row holds the new components in eight sections whose names start with **2.5 ·**. Each component has a yellow dev note beside it for your developers. Below those sits a third group, **04 · Page panels**: 42 panels that used to be one-off frames on the pages (contact form, locations, article body, podcast and webinar pieces and so on). They behave like every other component.

TOP ROW · YOUR EXISTING LIBRARY

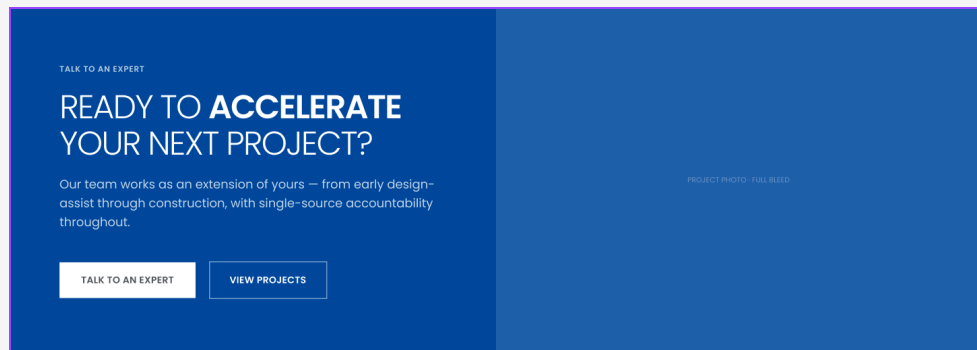

SECOND ROW · NEW IN 2.5

To jump to a section, click its name in the **Layers** panel, then press ⬆ 2 to zoom to it. The full list of what's in each section is at the end of this guide.

❖ 2.5 / CTA Decision Panel / Content left · Blue

DEV NOTE · CTA Decision Panel / Content left · Blue

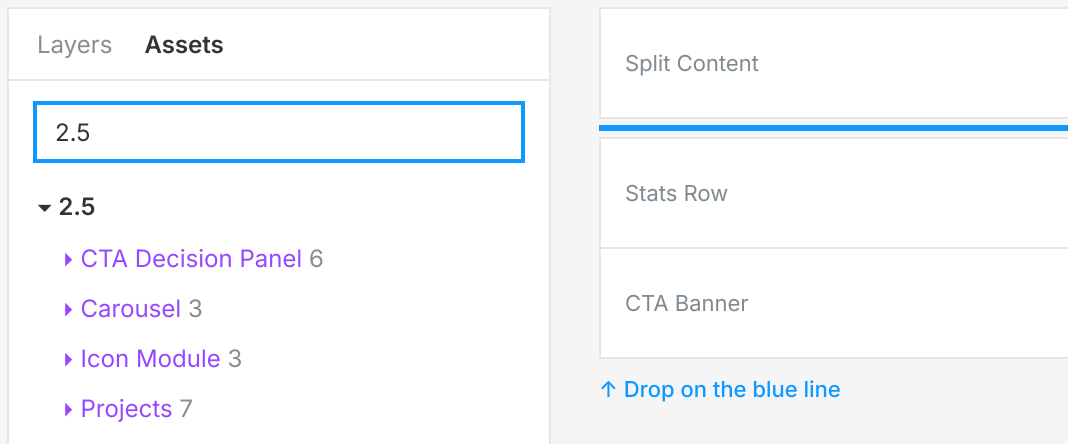

CTAs · a25-cta-decision-panel-content-left-blue
Dimensional CTA — headline + value statement + project image + one primary action. Six orientations: three content-left (image right) and three content-right (image left), across Blue / Dark / White-Light surfaces. Button: white or blue fill per surface; no white text on orange.

• Buttons: Primary darkens to #003D84 on hover; outlined buttons get a 12% fill of their outline colour.

In the **2.5 · CTAs** section: a component (purple outline) with its yellow dev note on the right.

02 PUT ONE ON A PAGE

Open the desktop page you want to change. In the left panel, click **Assets** and type **2.5** in the search. Drag the one you want onto the page and drop it on the **blue line** that appears between two sections.

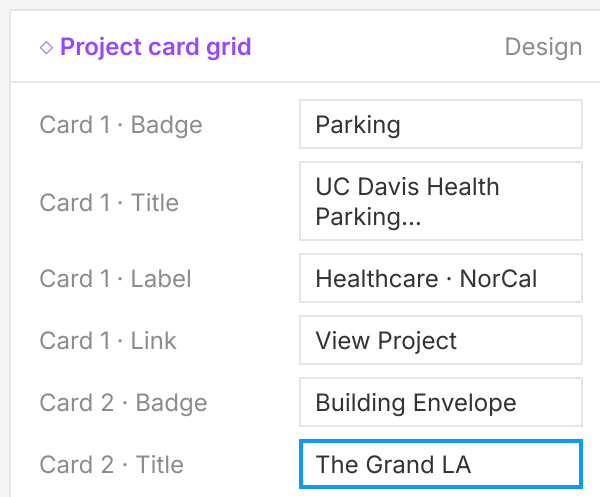

Replacing a section you've already edited? Right-click → **Swap instance** replaces it, but text you've typed into the old section won't come along. Drag the new one in beside it instead, copy your text across, then delete the old one.

Using the library in another file? Open that file's Assets panel and accept the library update when Figma asks. The new components then appear under **2.5**.

03 CHANGE THE TEXT

Select the section on your page. The right-hand panel lists its text as fields, named by position and role: **Heading**, **Body**, **Card 2 · Title**, **Card 2 · Badge**, **Tab 3 · Label** and so on. Click a field and type. Button labels show up underneath, under the button's own name.

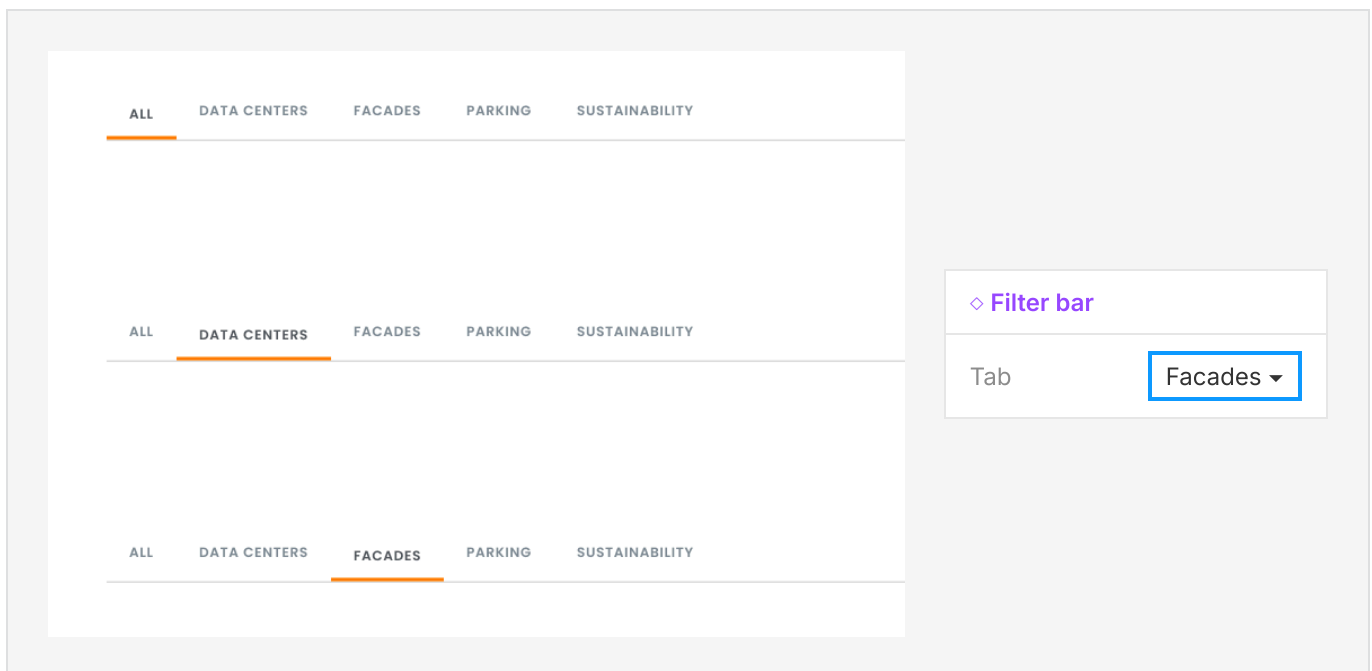

Big two-weight headlines (light words with a **bold keyword**, like "OPEN **POSITIONS**") aren't in the panel, because a field would flatten the bold keyword. Double-click the headline on the canvas and type over it. Keep the keyword as the last words; don't change the weight by hand.

Links. A link's label lives in a small nested part. Select the section, then look for **Text link** in the right-hand panel and type the new label there. The orange underline is built in.

Text that changes with a state, like "Showing 9 projects" or a carousel's slide copy, is also edited on the canvas.

04 THE CLICKABLE ONES

Eleven components behave like the real site. Each one has a property in the right-hand panel that picks what it shows: which tab is active, which slide, which section is open. Pick the state a page should show by default. To click through them, press **Present** (► at the top right).

2.5 / Insights / Filter bar: one state per tab. Pick one in the right panel, or click the tabs in Present mode.

COMPONENT	PROPERTY	WHAT CLICKING DOES
Insights / Filter bar	Tab	Moves the orange underline to the clicked tab
Cards / Insights feed · Filterable	Filter	Shows only articles, podcasts or webinars
Careers / Open positions list	Department	Filters the jobs; empty departments show a short message
Insights / Content archive · Paginated	Filter, Page	Chips filter; page numbers and Prev / Next change page
Projects / Filter bar	Type, Region	Product type and region combine; the project count updates
Carousel / Image + content · 3-up and 4-up	Slide	◀ ▶ move one card at a time; arrows fade at the ends
Carousel / Product highlights	Slide	Dots and arrows change the slide and its text
Project Detail / Spec panel	Photo	Thumbnails swap the photo; "+6" opens a full-screen view
Projects / Detail sidebar trio	—	Its photo gallery: thumbnails swap the photo, clicking the photo advances
Projects / Overview accordion · Alt detail	Open	Opens one section at a time; the gallery works the same way

Hover. In Present mode, text links fill their orange underline when you point at them, product category list items turn orange, project cards darken their photo and the product sub-category cards fill their underline. Buttons aren't prototyped for hover. The Projects filter bar's cards don't darken on hover.

The search boxes are for show; typing in them does nothing in Figma. Some states use stand-in content (extra carousel cards, page 2 and 3 of the archive). Replace it like any other placeholder copy.

05 STYLES NAMED "FLAGGED/2.5"

Some colours, type sizes and one shadow are named like *Flagged/2.5 · #FFFFFF 72%*. They're values the new components use that aren't in the 2.0 system yet. **Leave them as they are.** When you have a moment, look through them with your developers. For each one, either approve it as a new style or tell Nathan which 2.0 style to swap it for.

06 DO & DON'T

DO

- ✓ Drag new sections onto pages from Assets
- ✓ Edit text in the right-hand panel
- ✓ Pick each clickable one's starting state
- ✓ Swap placeholder photos for real ones
- ✓ Send the dev notes to your developers

DON'T

- ✗ Copy anything from the old 2.5 Additions file
- ✗ Detach instances on your pages
- ✗ Edit the components on the Components page
- ✗ Rename or move the 2.5 sections
- ✗ Change a headline keyword's weight by hand

07 IF SOMETHING GOES WRONG

For a single slip, press ⌘ Z. For anything bigger: **File** → **Show version history**, find the last version saved before the problem, click the **•••** beside it and choose **Restore this version**. Then message Nathan.

08 THE PAGES NOW USE THE LIBRARY

On **03 • Pages Desktop** and **04 • Pages Mobile** every section is now an instance of a library component. Nothing is a one-off frame any more, and each desktop page has the same sections as its mobile twin.

- **To change copy:** click the section, then edit the text fields in the right-hand panel. Headings with bold keywords are edited on the layer itself (double-click into the instance).
- **Two new sets** were added for layouts that repeat: **Feature list + media** (a list with check, dot, number or chip markers beside a photo) and **Card grid** (a heading and a grid of photo cards). Both sit in **03 • Content Panels**.
- **Mobile** versions of Featured Resources, Related Content Row, Timeline, Core Values, Assembly + Specifications, Image Gallery and Process Steps were rebuilt to match the desktop designs. Process Steps also has an optional heading.
- **The old frames** were kept: the sections called *Replaced page-specific frames* on 05 and 06 Page References hold the originals, in case you want to compare.

For your developers: send them **Figma 2.5 Dev Notes**. It covers these 45 plus the modules already in your file, including the expandable FAQ list (click a question to open its answer, one open at a time). Mobile versions of the 45 are still to come. Questions, or anything that looks wrong: message Nathan before changing a component.
